

## Theory of evolution (\*to be revised)

**Definition of theory:** There is a suspicion that eternal evolution happens in a self driven way. Meaning that resources, dependencies and structure of the 3D ether, space for life is "**rendered out**" based on **dependency to eternal evolution forward in time**. In practical physical terms, this means that constructive interferometry is applied in the Coulomb charge field in which **energy chunks interfere with one another**.

Thus, creating or destructing processes of forward eternal evolution. By eternal forward evolution, we mean that **resources, dependencies and structure of the 3D ether are rendered out based on constructive interferometry** in respect of the complete system.

This raises the concern of the presence of both life and anti-life. This theory **therefore assumes that catalyst and non-catalyst particles (God particle etc.) are created and destroyed along the**

**time axes** of this eternal evolution. Similar to occurring and disappearing species in ecology for example. So what we talk about basically is a purely **dependency driven system** in which only the forward time axis of eternal evolution matters. One note that author may make. By system theory, no matter which law you start following, you will **end up with the same system of complete existence** based on constructive interferometry.

This means that **presence of law in the world itself defines a world which is based on law**. Hence, without law, the world can not exist. At the same time, any error in existence creates a constructive interferometry ripple effect which automatically folds forward again. Hence, the presence of law in the worlds itself defines completeness of existence. It is also assumed that anti-life is a non-constructive form of existence in respect to the complete system. Such forms of existence typically include pesticides, parasites, beasts etc.

The importance of the theory of evolution is that we can now plan several factorial simple on longer range projections of complex systems. **Theory of evolution therefore also depends on system theory**. Meaning that simpler principle and better understanding of spatial/organic systems can lead to better and more precise longer term planning. Such design methodology can be key in military planning too, where large numbers have to be met typically.

Hence this theory can be crucial in resource planning where large numbers have to be met based on complex,

typically multi-layer and dimension organic/spatial systems in the real world.

## **Natural self-organization and gravity of time/space order condensation.**

From the above, we can conclude that systems naturally self-reorganize themselves by the condensation of order as we propagate forward along the time/space axes towards eternal existence. Hence, the fact of eternal existence in the world has a gravitational power of order that condensates non-lawful relations in the system. From such effects of order and law on systems, we can conclude the following hypothesis about creation:

The Biblical creation also described in the Quran and other religious texts is true because of the following. If we have
