

Challenges in green economy and urbanization. *Revised and updated files

Dear Sir or Madam!

*Challenges in green economy and urbanization. Revised and updated files! Economic study on modern technocracy and economy vs. terrorism. Are we adult enough?

Knowledge and wisdom is power. How far can we go in our society's and economic development and change? In fact, combating against terrorism comes from statistical analysis and discreet breakdown of the results etc. Pirates of space? If the mythology of "Oceans 11" and "Looper" movie is true? Should someone not be paying for the damages caused..? No surprise under the sky, modern economic development and change, in turn requires both social and economic analysis and study for a steady, non-interruptive continuum. A patronizing contemporary leadership of people is therefore a wise practice against disruptive abuse and terrorism. System theory says that systems, in general also have healing properties, meaning, feedback enhances automation and tolerance indeed. The author came up with the following breakdown of what some might already call a new age thinking trend. We tried it before! So how to maximize social and economic effectiveness? Here are the equations! Add your variable..!

1, Economic factor:

What sells really? Should we manufacture a great product and expect it to be sold? Or should we go by market demand? Maybe step into leadership and provide solutions to the society's and people's problems? Remedy for the masses. Interestingly, metaphysical thinking does help to tap into and understand the mainstream markets! Should we work the numbers? Without numbers, who we are? Thus, evolutionary ecosystem development is also an empirical process. Critical mass of momentum and continuity of our democracy.

Justification drives the system. People pay and do things that justify themselves. Selfish or smart enough our genes and thinking are, we really want to pay for and do things that basically justify us, our existence and testimony of existence and living. Economic analysis have proved that the best paying jobs apart from well paid jobs such as law and education are automation of systems and democracy in general. Create your own garden and live in symbiosis! Horizontal market talking, the software industry is one of the best investments, since you create your garden in an already well established software industry world! So what markets are well established and worth to invest in? Fishing for better ideas? Gold mining in the ecosystem and food-chain of markets?

Best meal tip: "Fish & Salad".

2, Social factor:

Can we live in better harmony with each other? We should! Since social and economic ghettos of II.-nd World War, our society and economy have improved a lot. Social science comes up with surprising study results. In fact, it might be better to justify democracy, since people, clever enough, can take a break from the slavery, suppression or terrorism of simply talking bad people. In a justified democracy against Nazi voodoo ISIS/L and Skull and bone sectarianism etc. founded underground cell networks, we can just simply do our things as present events indicate. Ideology of the voodoo Nazis was therefore neither a practical, nor a democratic society, but a largely homogeneous system of suppression and terror. Culture is remedy. It accommodates diversity and therefore expands the dimensions of democracy.

› Author of several influential books – most notably Character Analysis (1933), The Mass Psychology of Fascism (1933) and The Sexual Revolution (1936) – Reich became known as one of the most radical practitioners of psychiatry.
https://en.wikipedia.org/wiki/Wilhelm_Reich;

Best social figure tip: "Pablo Picasso"

3, Security and defense factor:

Since Josef Mengele, Adolf Hitler or Osama bin Laden, Dr. Tom Peters have proved his saying in his Re-imagine book. Terrorism and crime will always be present, no matter how modern our democracy will be! We have learnt that underground terrorist cell networks are founded too surprisingly. In fact, terrorism and crime does not necessarily occur by itself alone either. Most things happen for a reason and the more knowledge we have, the more our democracy is justified by knowledge and wisdom. Hence, the better level of security and defense we can have! What can our society, security and defense do about these things?

P2P broadband mobile computing

It is known that beyond NFC or Blue-tooth radio, mobile phones locations can be determined by not just GPS but also the mobile phone repeater's triangulation. This middle-tier technology requires further sophistication but have a longer shot in many ways. Location based mobile P2P services could bring better social and security integration, perhaps better quality of services too. P2P video games and file sharing, chat services. Did touch screen phones became a maze of the devil compared to the business smart phones 5-10 years ago? Should we go more sophisticated about smart business mobile computing?

Best security setup tip: "Wolfenstein 3D".

So not necessarily but practically, should we also look at terrorism from an ecologically evolutionary as well as from an empirical point of view? We should! Will the Middle-East peace process bilaterally morph into the new international space program of NASA and ESA? Do space lagers of Nazi/ISIS Brussels sub-groups exist? Pirates of space? The DejaVu of ISIS/L? The District 9 of the Middle-East? Could the desperate demonic war against ISIS/L, Skull and bones sectarianism, PKK (sub-cultures) etc. turn into Liu Kang's Mortal Kombat? Does Nazi Al-quaida, ISIS and Skull and bones sectarianism have a terrorist reserve in the Sahara and outer space? With Mr. Donald Trump and a new military space command, could the return of contemporary, old fashioned leadership such as that president George W. Bush or past British prime minister Tony Blair have conducted, bring the success of the 90's back? It already looks so!

› Take the survey!
