Preface

Hi ! This book is by an old guy who has been working in the small to enterprise size information technology industry. This guy have climbed under server room floors for cabling as well as worked on tracing down configuration tech flaws

on mainframe servers. The author spent over 7 years abroad in various positions and places.

It has been observed during various projects and tasks, that certain design and process planning methods keep paying off several magnitude of conventional approaches to solving problems or carrying out an international project. This has proved to be significant where time and precision is crucial and failure or a miss of the right path also have to be minimized to low levels.

The book comprises of 29 chapters in total and aims to provide an easy to sink in and applicable set of tools for quickly solving large chunks of tasks in a solid and stable way. The knowledge of the book points back to a wide set of practical cases as well as books by authors whom are on the forefront in areas such as management and cyber-geography.

Most importantly, the book aims to give a grasp for a solid base and inertia in everyday life where action and a quick, precise execution of tasks is an everyday expectation. One can observe, that in many cases, people's dreams or even simple wishes do not come true as expected and in many cases, things turn out in burning or money thrown out on the window. It is well known that almost nothing compares to the preservation of inner

peace when it comes to the time of solving a problem or doing something.

The reader can observe that many parts of the book are laid down on foundations found in Tao and Islam. Religion is a powerful thing and this is also something that the author kept in the air along the text.

Or someone can put it this way, if you really want to do something, than taking your dreams seriously can be an easier way to get there.

And on the other hand, the reader should keep in mind that being in peace with our environment or stepping away from offensive areas is a wise thing to do.

The author also touches on homeopathic healing and energy absorption for coping with demanding times, yet, preserving your gravity and credibility. The author hopes that the reader will profit from the book, be valuable and bring more success to the reader's life.

“In submission to Islam for pulling me out of the ditch of worms and for the victims of radio weapons in the world”

Mr. Zoltan Papp (author)

Introduction

You come and go in the world and observe things, meet various people. One of my favourite places is Victoria railway station in London and Battersea park just on the other side of Picolo in London, United Kingdom, about a walking distance from Victoria station. I never forget the people I met at these places, I had many great adventures at these places and I am proposing to write this book, that urban living and spiritual culture is an increasingly important factor in our everyday life.

In about 2001, I noticed the amount of green in downtown Kuala Lumpur, Malaysia in a book. I did read books and studied cities such as downtown Chicago, but the amount of green and lavish space with green clearly posted a message to me that such an environment enables one to be more peaceful inside. It is also interesting, that a music brand, Buddha Bar have also commanded me a distinguished message of where peace can be found. Being a senior system's engineer, I do not think that technology has limits but I do think that the environment in which we live consumes a significant proportion of options and has crucial influence on the way we live. And this is also a reason why religion has become more important to me. Technology has no limits, but there is a difference between technology and people and this is what counts, identity. People have identities, and so the comfort of life and spiritual well being, satisfaction, privacy and owning is more powerful I think than the platform of technology.

During my work in system's engineering in information technology, it has come to my attention that torsional waves such as microwave power transmission have interesting qualities in 3D space. In more aspect, quiton/perceptron physics (sol-i-ton ~ sol-u-tion) (real longitudinal Coulomb current/voltage → association) precisely touches the subject of positive and negative time domain in the aether. Most of the waves that drive quiton/perceptron physics are torsional and so can rotate to the right as well as to the left. This is also called the right and the left door in books. This means, that you either choose the right decision and will go up, or go left and will see how you find your way forward. In terms of life processes, this can be either constructive depending on the direction of the waves torsional rotation or destructive. This is an interesting topic. It have also been proved that if the wave is not rotating to the right direction in microwave power transmission for example, then the power transmission will not work and will simply not be transmitted. This is also an area of interferometry that many people study about in many ways and also various books discuss this area. It also have deep roots in cultures. In the summer of 2010 in June the 13th. I swam across a side of a stream of the Danube on a sunny day in middle Hungary just under Rackeve. About 300 meters from the coast, a strong hit by a dark and suffocating shadow swam under me in the water. Something like this have never happened to me before and so, being a sport man and experienced cross-country mountain biker, I slowed down and tried to observe the natural effect that I have come across with.

The waves in the water were not natural smooth waves but more like sharp arms of black waves reaching out. I heard in the radio later that day that the UV radiation was very high in the country and I think, that indeed, the Sun could have caused the above turbulent radiation

I also heard various examples of measurable microwave radiation at fruit tree farms where fruits grow several magnitude faster and larger, than at other places due to the aether's radiation at such locations.

Such interesting natural events are indicators that the study of mother nature is an important and interesting field to study. Yet, influential in our everyday life just as lighting up a candle with your fiancée or wife on a Saturday night in the middle of the night with a red wine can energize and empower you for the whole week.

Is it the same as 50 USD or more ? What is more influential in or lives ? I am a spiritual person and so I believe in the power of caring for each other, spirit and moments in life.

Chapter 1 - Standard Markup Language of U (SMLU)

- Standard Markup Language of U (SMLU) algorithm. 'X' or reflection as we know it. The importance of submission aka "7 + 1 = 8". Standard markup language of U. The dishwasher of the aether. Don't let get things washed away if you want those. ...!

Every day you go to work, you make an uplifting decision or have your lunch in middle of the day, you are building in most likely, discs of your existential background. You register at a service provider, you give and submit to make something grow. These somethings are generally referred to as your existential background.

In its truest sense, your presences in the system basically foundations for your own existence to stand

we all live in are upon and grow.

Many books and wisdom foundations of our life but we think in RFID term of the

books discuss in general, these can also be considered of discs if aether.

pillars or

-?-

Let us call these layers or obviously known and cherished parts of our life, discs. Now, if we stand up to our referenced identities, stand by the ones we think are important for us, we get a

system of discs which protect us in the world from not being present in the system in which we live in. It is interesting but if you do this, and dare to name your referred ones and background

for yourself, then it is a delicate time and opportunity to embrace and build further your castle of discs basically. I also think the uniqueness enhances self as well as the overall system, due to the rise of self consciousness and being pro active. And most of all, the most important thing is that you actually build your own and referred people and services and not anything else.

This is the place where the Standard Markup Language of U steps in, in a simple think through

check. If you are really doing the right thing with the people really important for you. Why do I say this ? I have seen people leaving a great deal of opportunities behind in front of their eyes and so on. Several times in my life, I witnessed massive disposition of computers for example.

About 95% of the time, I was the only person collecting disposed computer equipment. Was it a mere luck ? I took a deep breath and promised myself that I am not leaving the free lunch there. And I did so have these lunches several times. However, you can spot, that at certain times of your life, something is suffocating around your body and space.

Head (Master) and Tail (Slave) of the falaco soliton as per where is the falaco soliton in the time/space universal contiuum in the Coulomb field. In other words, in which place, country, planet is the above system as per inertia.

Schematic view of a Falaco soliton

I also observed that at uplifting decision, in many cases, bad things start to happen. It sounds skeptical but many music tracks and movies discuss this. You have good things beginning to occur in your life and so a sudden strike of attack on you occurs from the least expected.

		
<p>Falaco solitons occurring when you are pulling yourself in a boat on the surface of a lake for example.</p>	<p>The Falaco soliton's tube.</p>	<p>Time/space Falaco soliton as one's life for example. Mecca, for example looks the same as far as the author concerned in time/space. That is why it is a guiding inertia for Muslim people.</p>

Why is it ? If you have good, reliable friends, respect them. If there is a good company which truly cares for you and for your money, then support it, cherish it.

I always had this habit of mixing with supportive people and keeping in touch. It is up to you.

It also have been observed that bad things occur even when your are in a good company and doing good things. This is because evil does not see the distance or limits in its existence. Many cultures study the nature of evil, most particularly, gates are built in front of houses at such places as Romania or Hungary and there are even gates built on the sea in Japan for example.

Evil you see, does not know of privacy or other's self identity due to its superior own belief. As a result, evil can produce extreme cases of destruction in which not even evil is seen due to the amount of laws broken. In many cases, this is why Lucifer or the devil if you like is considered a poet of law breaking. I will write about how to nourish your self and clean your mind with a few simple Feng Shui like steps that can straight your vision of the right acts and directions to take.

This document is about a simple algorithm that was developed from various publications and research material that I wrote about on my <http://hothertz.fugeeonline.com/> portal.

Basically, everything which is not helping your vision of the right acts to be taken and directions to be taken can be considered a noise basically or information overload. If you have ever lost path, this is how it might have happened from the viewpoint of “not you”. Where you were not watching carefully enough or in a wide enough perspective... Are your enemies from another country or from another planet ? Did you act accordingly on all space, planet, city family and friends wise ? Which part did you miss ?

The algorithm looks as follows:

- (1) Sensed other value or any emotional activity
- (2) Localized it
- (3) Abused it (by coupling with non-real things, magnetic component [Ref: RFID])
- (4) “X-ed it” (using “tubes” *reflection etc, “tubes” are a way to suppress positive life forms)
- (5) Taken value or emotional content from person.

Operation:

Base rule: It is the best, nothing else is better than its own existences. Vane because it is nothing. It knows or at least, might suspect that it is nothing.

- Abusing. Abusive exposition due to vanity, everything else must be “X-ed” or taken away.
- Cynical. Due to vanity, it looks down on everything else.
- Anger. It acts like a bull and demolishes when its aims fail.

Obviously, these are things one should be avoiding. 🤪

Tips of rules against evil:

- Be a team player, be aware of your environment 🙄
- Have a solid, heavy and concrete base
- Avoid sadists
- Be a game master 💡
- Do not let your obligation to be capitalized on
- Figure how one may fool evil. Sometimes even a joke might be a solution 😊
- Support your side and the good side lawfully and

wisely Particulars to occurrence of evil:

- Fag 1/X 🤡
- Ugly
- Shy, non-personal or direct. Weak.
- Vain
- Giving up 💡
- Impostor with pride and joy (poet)

Tips: Having a break or going for a holiday. Having a hot chocolate or a glass of wine is a good idea to bypass evil events.

I think that the vacuum, pure Coulomb charge or 3D space if you like, does communicate reality by giving “tips”. These “tips” are also discussed in quinton/perceptron physics or the Greek of the aether if you like. The discovery of the Higgs bozon, for example, would also be an important success in physics to explain these things. References: <http://www.cern.ch/>, <http://www.iter.org/>

Does 666 work in a 3D space?

This is how evil “X-es” its pride. Evil has a good and bad arm (call it “pork”) and have one who is making the pride X (call it “spider”). Divide and conquer (Divide et imper a). But there is a problem for the evil. Trying to cause logical events in 3D space is the tool of fool. Logic does not take anyone anywhere.

Man is rather a rational entity not a logical one, walking on the ground.

Creation might come in different forms, yet, you can see shapes, buildings, products, attitudes that all shout of something that looks the same to me all over.

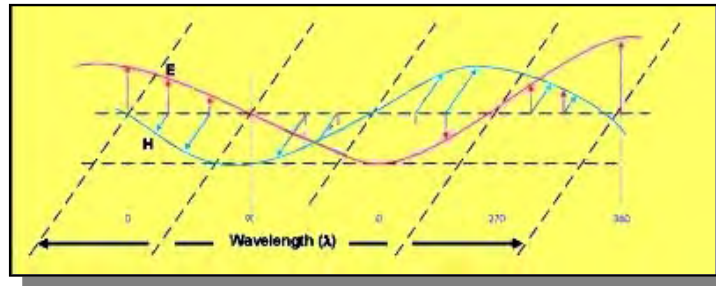

Clearly, the forms and shapes of objects describe a lot. You can see useless objects for you and you can see useful objects for you, or just simply beauty. But as a living entity as a fly, not much profit can arise from it. These useful, useless and beautiful things are all around us, it is up to you to decide which one and how much each of these have anything to do with you or relevant to you. Working with relevant and reachable things is a powerful thing. Something you can not reach might not be worth your attention and energy to be wasted.

Avocado

I also think that since U (Voltage or magnetic component) is an algorithm or mechanism, Electromagnetic Field Mechanics (EMFM) in the ether, it could be distributed unevenly across space just like a mud. Reference: Atlas of CyberSpace ISBN: 978-0201745757

Please note that U is also considered the Tau in the aether that could have been caused by non-wanted chakras or other life and self damaging forms of waves. Imagine it as something of the distribution of light and evil (magnetic component aka “voltage/U”) in the world.

Some observation and science have documented that at certain areas of the world, certain life based events happen better or faster. For example, at places like in Scotland and Australia, certain life related events seem to happen at speeds of several factorial than at other places. I suspect, that this could be due to the location’s low level of U or magnetic component, voltage in it in the vacuum.

Traveling EM waves are composed of electric (E) and orthogonal magnetic (H) fields. But as one can see it in the picture, there is no base to the wave system but an ocean of waves as if you were floating on the surface of an ocean which can also be extremely damaging psychologically. This is why faith and religion are important and things with strong psychological healing qualities.

Actual look of longitudinal wave propagation without magnetic component. One can well observe, that without the magnetic component of the wave system, the longitudinal wave on its own propagates along a straight line. The picture is the output signal of a military spark-transmitter which is an extremely popular and reliable transmission device.

(Negative time)

The Negative Time Continua --
Model in Which quiton/perceptron physics
per determination is needed to get out of the "ditch of worms"

Positive, negative and universal continuum in the Coulomb field.
Quiton/perceptron physics is applicable in all 3 fields.

I think that U is an algorithm in the vacuum which objects processes since if U is a parasite and therefore a terrorizer of layer 3, then it automatically objects the unfold of events in layer 2 and 1 too. We can consider layer 4 the layer in which self identity occurs. I also suspect, that, such parts of the vacuum where there is a lot of algorithm of U (hell or underworld) could be used by evil to terrorize and abusively expose existence. One might note, that such parasite activity can be miraculously unseen sometimes since one does not see “shadow” in the process since the parasite or magnetic component if you like, too, is fighting for its identity rights. Except, violating all possible laws of the world. All parts of the text are freely disputable, however please note that in our everyday principle, if we do not like something or someone, then we simply will not put effort to its growth in any way. Reference: 3 + 2 layer of the aether.

Various existences:

Granulated (domain/group) broken up mud field

Various falaco soliton degree alignment types in a falaco soliton system aka reality

[Concave] – The falaco soliton alignment is supportive in the system.

[Convex] – The falaco soliton system alignment is not done correctly.

[Straight] – Perfect, straight through alignment to the falaco soliton system.

[Straight+ pro active] – Pro active, (leader) self driven alignment of the falaco soliton system.

Constructive interference:

Developing functional complexity from structural complexity using constructive interference:
Classical example. Austin, Texas, United States

(1) Complexity

(2) Structural development

(3) Self-identifying blocks of a system

(4) Overall transition from passive to dynamic harmony nature wise

I go to work, I do my job, I can pay my bills, I exist and conform to the system I live in. Islam is the religion that, by either way, does not expose or put people into cross since, I think, its pure foundation is based on the support of existence.

For me, this is the support and protection of the existence of matter, soliton if you like. I think that in the world, nothing comes before or after people. Man is the ruler of the world and therefore, no system can attack man since what system is it if it damages itself. Therefore, as a person, I 100%-ly lay my existence on the rules of physics and law. That is why I think that solitons are the most important and fundamental phenomena in physics that is known so far. I think that we all stand alone, act alone and responsible for our acts by ourselves and nobody else. It can be called free will, I think that this is the gift, our system, the government gave to people.

Therefore, I would like to dedicate this theory to the corporate, politics, security and defense entities because I think that true reality based on your own individual perception and law which is of key importance to conforming to the system you live in.

As an outlook of the future, by reading several books and consulting with people, it is becoming more and more evident to me as it is written in several books that matter has Tau content in it just the aether itself. More precisely, any matter or entity of matter such as a tree is capable of mental representation of an entity.

In other words is it well suspected that the aether is symbolically representing its states with mental representation of itself in time and space as quiton/perceptron physics says too.

Chapter 2 – 3 + 2 layer of the aether

- 3 + 2 layer of the aether and the Laplace equations aka free will. Theoretical build up of the aether

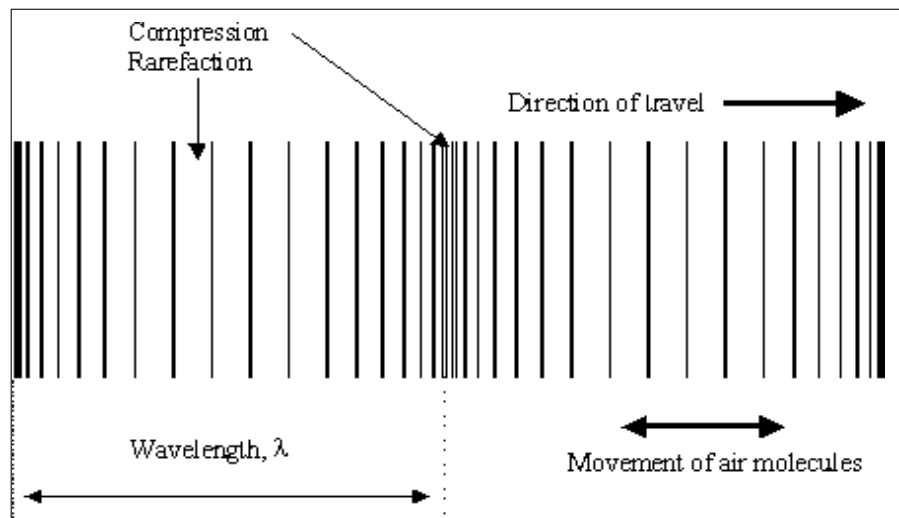

First of all, there are 3 basic types of waves in physics that we know of:

- Transverse wave**

- Longitudinal wave**

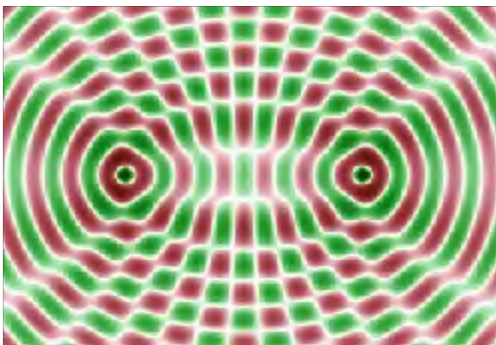

● Torsional spiral wave (RAD, radiant energy, arc, microwave power transmission, chakras etc)

These 3 type of wave types basically determine our every day life. However, a type of wave effect called soliton is unique among all wave tapes. A soliton is a self reinforcing wave that can exist, grow and contain more over time just like a carrier wave. If our Lord is made up of solitons, than I wish it have as much content and power as it can have and no enemies.

As an example of the torsion wave in 3 dimensional space, people without other reason or goal, tend to converge North and East in General.

If you think about it, in a 3 dimensional space, if you have no fixation point of inertia system, than you will be simply going with the law of the torsional wave and most likely, your events will be determined by this wave just like when you pull the plug of a sink, the water forms a whorl because in 3 dimensional space, the water has no fixation points or a holding frame if you like. That would make the water flow down in a more linear way.

It is an interesting study, how such torsional waves (RAD) can affect processes if you consider that the matter operates at 10^{44} Hz in the pure sea of Coulomb charge. This means that, if one's body can be considered an RFID chip in 3D space and the matter (standing wave) operates at 10^{44} Hz by a study, then pattern matching, aka convergence due to the casimir effect in such a space can occur fairly quickly.

An RFID chip

A zoomed in RFID chip

As a result, people too, need frame in their life too to base their life on. This is why religion is a powerful thing. A religion can be most important foundation in one's life that one can place all action and reason of existence in life.

Imagine a set of rules and explanation that can hold you in

any situation. Wouldn't it be good or does something already exist like that? Not easy I guess. One says. "Life is a lesson, you learn it when you through"

Turning direction towards the creator as per WM (plasma) modelling using RFID methodology

-Top left corner. The weakestly fixed point.
This is the easiest to turn right or left.

-Absolute fixation point in time/space as per turning towards the creator. The absolute.

-Bottom left corner. People and things which flow without the follow of the creator.

-Bottom right. In the shadow of the creator on the street level. People with faith.

If you observe the spread out of the cities for example, you can see that most wealth and intellectual property tend to end up in the northern and western areas of a city. There is even a song track about it written by the famous Pet Shop Boys. Eastern girls and Western boys, Go West etc. How funny or ironic is this.

I originally started thinking about convergence in 2003 when I purchased Field technology I from Dr. George Egely. The book precisely introduced the subject of the famous Casimir effect. In about 2005, I discovered the famous book called The Secret written by

Rhonda Byrne that is also very similar to what the Casimir effect describes in terms of waves and soliton pulses, ISBN: 1582701709

If we think about religions in the world, then we can find some very creative and positive knowledge and wisdom but still Buddhism, for example exposes a person as the founder or leader of a group of people no matter how good the foundation of the religion was layed down. I am aware that kings and presidents exist to represent a nation or group of people, yet, I think that such pressure and tie can be released by placing a universal thing in the center of a system frame such as religion that can not be exposed or abused. And let the religion be based on a knowledge, wisdom and rules that people have gathered over the years. Such frames of groups are Tao and Islam for example.

Tao teaches how things work and does not expose any entity, it bases its teachings on the rules of the world but there is no central entity on which around it is based, hence the symbol:

The symbol obviously symbolizes the balance of two fighting forces in the world based on a set of rules but there is no unity, there are only rules. Islam, however does unite its foundation in something and that is the Kaaba stone in Mecca, Saudi Arabia.

Hence I dare to question that Islam could be the most advanced religion among all. I obviously do not want to paint the fence with the same colour but I consider it a good food for thought for myself at least.

A theory about creation at first place:

A drop of water into still water. So the absolute flat and rigid energy field due to perfect balance I guess, was broken up by a wave from somewhere. Such effects can happen in physics called bifurcation for example. The point is that the system simply “slips”. No matter how perfect the world is, a single “error”, no matter how tiny it is, could have broken up the perfect stillness of the World. Internal pressure or anything can cause such a thing in physics. Once there is dynamism in the wave system basically, then interference and hence, creation can occur.

Please note, that creation almost always emerges from the interference of 2 or more different things in the World as Tao says too. Once there is creation, it folds into a never-ending process. Since who can rule the vibrant existence of the world, not even the Lord.

How things work ?

Execution of tasks

1. Iteration
Tasks executed one after another.
2. Repetition
Repeating the same task over and over again.
3. Selection
Making a decision, a branch.

Distributed evolution

The same pattern can occur at 2 or more places according to evolution. Hence, there is proof that evolution is distributed. If it is true, than we have chances that other civilizations exist in outer space. Reference: The Biology of Mind: Origins and Structures of Mind, Brain, and Consciousness by M. Deric Bownds, ISBN: 1891786075

The religion of the system

Exposition. People vs solitons of the system, matter, or as you like in the Religion of Islam, The Kaaba stone or matter itself if you like, a solid state of common existence rather than a changing entity. I believe in the system, therefore I am in the system. I abide by its rules, therefore the system supports me. I trust police, I trust my government, my car's manufacturer that it built a safe and comfortable car that I can use with the ones I belong to and even more. If I have a problem with my subscribed service such as my mobile phone provider, I call customer support and I will receive help. Because I paid my bills and I am a registered customer of the communications company. If I am in another country and I get in trouble, my country's embassy will help me to get home. There is no limit. This is the religion of the system which is built on a foundation called a religion or faith if you like. System is the power. Similar to the Matrix movie. You feel this when you pay your bills, you go to church, you report to an organization and so on. I act on behalf of the system, a system that does not tie me but allows me to explore my limits as well as provide shelter against the extreme conditions of out of the system conditions such as being unemployed or not having a citizenship.

Not too complicated I guess, the most shocking discoveries are almost always so simple that you do not believe in it at first. Why is this? You simply face truth and you can not see it because there is no dirt or image in it to be differentiated from...This is another reason why modern model agencies have preference for woman with a type of error in them, something that creates an image of self.

If you have no properties, then it is difficult to be differentiated or known.

I guess we all differ in some way and that is the good way.

The 3 + 2 layer model of the World:

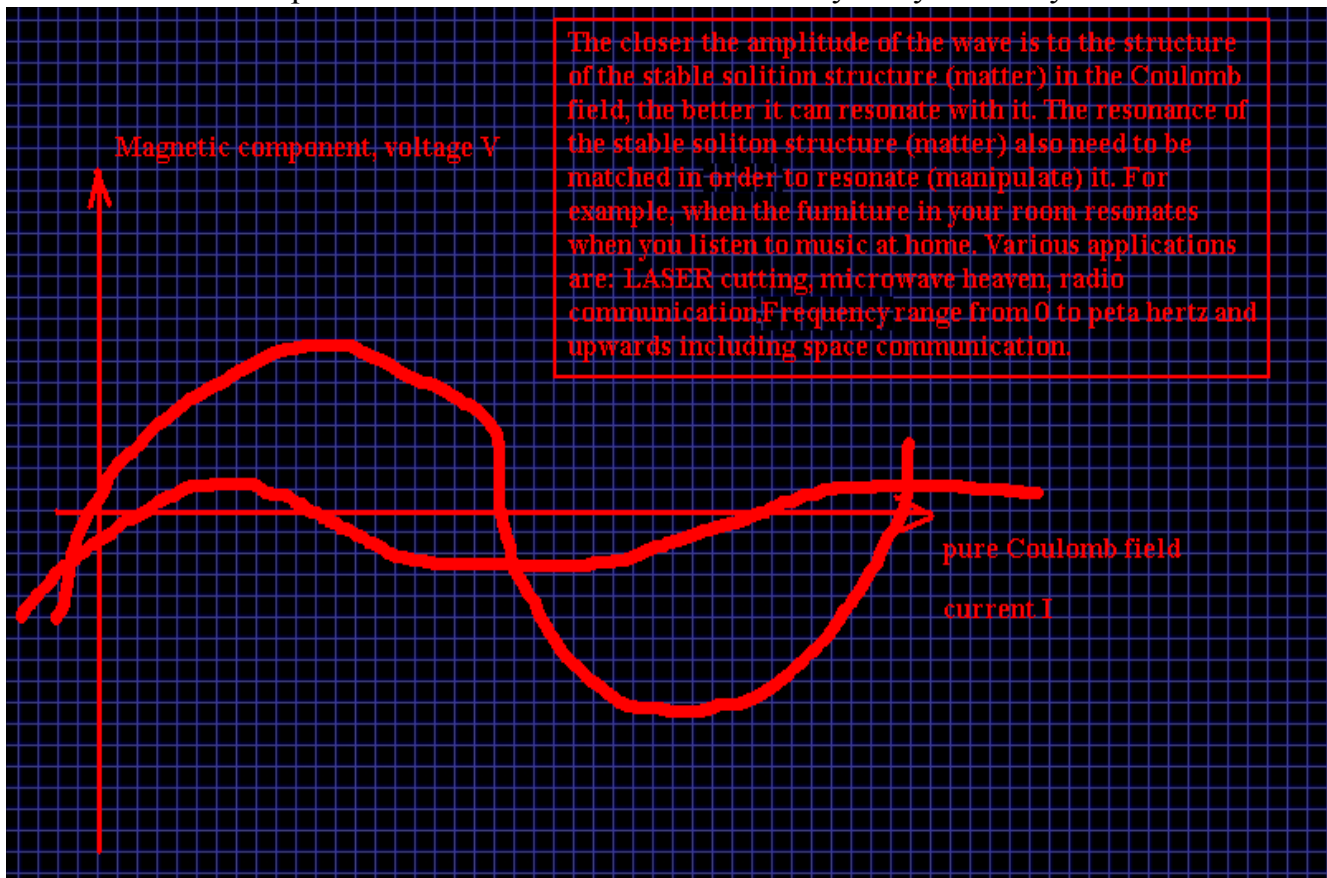

2. Heaven. Where angels supposed to exist I guess and God is the Lord of this space.

1. Hell. Where rats and other animals rule space including the devil itself. This is the opposite of life. Cold, no dynamics, silence and darkness. This is where suppression occurs that makes the creatures of hell like a mad kid.

3. Processes. A dimension in which space is made up of processes. It is the interdependency of the processes that is most important in this space. In other words, care and love about anything that has an entity or can be called on a name.

2. Events. A dimension in which space is made up of system of events.

1. Vacuum in which mass flows and exists. This layer is also known as Dirac sea, Higgs field or Delta-E field if you like. This pure flow of Coulomb charges in which matter operate on 10^{44} Hz and flows or hangs basically in this sea of pure Coulomb charge. Similar to how Earth for example is hanging in space which is actually pure sea of Coulomb charge. According to a study it also have distributive significance as a base of quiton/perceptron physics as a transfer layer. Each matter or energy chunk can be considered an entity. Each of these entities form a process which can interact harmonically or dynamically with one another

also studied by quiton/perceptron physics. However, please note that Hell and Heaven is a division for the Lord, that is why true Lord can exist in any part of the World at any time since the ultimate solution to a superior being is soliton. And a soliton does not know limits. As a result, the Lord is capable of shading light into Hell and burning up the cold of Hell for a better united World All parts of the document are freely disputable.*It is an interesting hypothetical question for thought, weather Hell and Heaven could be magnetic components in their nature, of layer 1,2, and 3.

Chapter 3 – Protection aka order

- Protection aka order. And the importance of faith. This text is an extract from a forum I posted my thoughts about on law and order and its importance in one's life.

Hi,

Thank you for your reply and i apologies for replying only now.

Yes, i think that what i seek is order on all levels of existence. And i think that this is what you mean too. Either way, something tells me that Islam is about the promotion of order and this is a very important thing. If you have no order at any given time, than how do you expect to reach results in a changing world ?

I am an engineer and so i like if things are available for my needs. I do not mean about amounts but the things to fulfill my daily and weekly needs. No matter how little these things might be, life has suppressed my resources so much that i have been seeking order to put together a working "gear" that allows me to reach my goals. I think that Islam does support the perfection of law and order on all levels, which allows for achieving my minimal daily needs to support my and my fiance's existence. Obviously, i am too a respecter of the Lord. However, i have this in me that i can not communicate with the Lord directly when it is time for action, and i am in need of answers. So i think that perfecting self life based on given and working laws is a way to reach goals.

It might be interesting but i am most feel closely with defense entities, yet, I think that Islam is about the same: Supporting law and order on all levels. The difference is that Islam reaches this and enables anyone to practice perfecting the seek of truth and play with reality on a theoretical level to reach new levels of understanding of the rules, world and the Lord. I think that defense allows similar discipline and exploration too but laid down on governmental law.

The idea i tamper with is that areas of law exploration that defense might not be able to explore Islam can still provide. However, i think that why defense would not be able to provide the same ? Isn't the support of order the same as defense against evil in your life ?

I think yes. So i think of Islam as my spiritual arm against evil in my private life. An extension of law that governmental law does not describe yet. But I question, it could actually I think, without affecting anyone's identical rights or views.

The reason I think this is because of the following. People tell me that I should study Islam more. I 100%-ly agree with it, but I think that this need for study has a message. And I think that it means the constant exploration of laws of the world.

I also think that, it is actually a space of thought that we study when one means, the study of Islam. Space of thought of our lives which interfere and new ideas are born. More exploration more knowledge, more understanding. All you have to do is watch....or sunbathe if you like.

I think that this idea is well related to multiple derivatives of optical solitons or any type of solitons in the world. Please see my SMLU publications for more.

So the conclusion is:

Law and order is basically defense against evil, hence Islam aids security and defense or existence if you like. I think that it is an important thing. I am currently thinking that security of existence itself could mean Islam because I seem to see no limit to serve this rule, due to the constant exploration of laws of the world which arise from space of thoughts. It might seem interesting at first. Think about it.

Why do I say "My Islam"?

I obviously do not want to appropriate Islam. My point is that I look at an idea of something that empowers self and I can take It anywhere with me anyhow. Some might ask. Why help isn't there when you need it ? So many time I see this happen. Is the Lord not powerful enough ? I think that it is more about getting it right. It is up to you to localize yourself in time and space to the right place. This is why knowledge, practice and tools are important. This is why I think that the FIT book is becoming more and more recognized on the book market. A

pocket knowledge gear of the aether to provide every day solution for people. The knowing of laws and order, your "pocket gear" in everyday life that you can vividly use and practice in everyday life.

Chapter 4 – Summary

- Summary. Drivers of our life. Things to be considered in everyday life.

Parts of this chapter were merited from a conversation with a professional in the field from the United States. The reader having read through the book, probably wondered about practical usage and point of some the topics mentioned in the book. Therefore, I would like to bring up a few principles and points which are considered to be key by both the author and people in the field. These topics are important and will, the author think will become more important of a matter of study, since determine our everyday life and, are also touching on the most important things in our lives, our loved ones, people and things we care for and our own protection, the perfection and solidification of the system we all live in.

From a conversation ;-)

First of all, i think that there are layers in the aether that determine the coherency and unity of the world. Otherwise, it would fall apart or some thing like this.....

So

Base: Pure Coulomb charge (Vacuum) in which matter exists
Layer 1: Events

Layer 2: Processes. Everything is a process which can be called upon a name. Due to time. If something is 'born' in the world, it has or can have a name. From that point on, it is a process (of time) in the world until it vanishes if ever.

Layer 3: Interdependency of processes -> Care and love. (This the part where hell and heaven the real world and the underworld are divided because from this layer on, the other side works against the other side That is why the other side, the fake one is called hell or underworld
(Under the world.....not in it. in the system)

Layer 4-5: Magnetic components from layer 4 above due to not being real but magnetic components of the real world (or system) if you like. The system in which we live, normal people live, most of us, which determines the state of the system or the principal ethics and rules of it.

And then there is quiton/perceptron physics which is also studied by the US Army Material Command. Sol-i-ton ~ Sol-u-tion.

My fiance used to read car registration plates and read words out of it. It is something like this. Quiton/Perceptron physics is good because it is also called the Greek of the aether.

It can be used for information retrieval and communication in large distances due to being an echo of longitudinal (electric/scalar) waves in the aether. Something else I have been thinking about is the importance of W and M wave presence and its key importance in even the most fundamental parts of our life. M stands for male related functions and W stands for female related functions, purpose of life. If these two type of presences meet, the author assumes that creation will occur. In other words materialization of the work put in to your life. Piece be with the reader.

Notes

Zoltan Papp If you would like to find out more interesting things of the above, visit my Digg site at <http://www.digg.com/zoltanp2> It has half a dozen of such publications of mine ;-)

Zoltan Papp I have recently read that new research has been carried out regarding Radian aka arc waves which means that a torsional (spiral) spreading wave can affect energy fields. This is basically the same as used in microwave power transmission where the wave also travels in a spiral, torsional matter. You can find some more information on it on in my pocketFIT book too. Have a great day ! Zoltan

* * *

Many people ask about time/space reflections. Symmetries that guide our life or might be just giving tips, directions for us to find our way in life. WM echoes, if we want to call them on their proper way are basically time/space resonant reflections of events and more or less information that is in the 3D world, aether. If people and objects are considered antennas or more like RFID “chips” in the 3D time/space world, aether, then by falaco solitons (chakras, torsional waves, teleportation, microwave power transmission) are basically torsional (spiral) waves that connect us and the objects and the events around us in which we live and belong to. This is how ideas get to you, this is how your friend or fiancée is calling you up when you got home from work and so on. This is the underlying mechanics of our system that we live in, which connects us. Now it is well known that sub groups of people abuse and exploit this mechanics and abuse people for their own good for money. The author recommends the reader to stay away from such practices since betraying a family or any social relationship is of the highest possible crime by the creator since by statistics and observation all crimes and problems (accidents, death) can be traced back to the abuse of love and care. It is not too difficult, abusing your loved ones have a damage ratio of over 500% to just by breaking a car's windshield for example. Please also note the abuse of the family relation that you live in which can expand from your city to the way larger areas or even the globe considering also the motivation that drives you.

Glossary of terms

Falaco solitons: Spiral, torsional waves that can exist in time/space as per layer 3+2 written in the pocketFIT and FIT books. It is also said that one's life is also a falaco soliton. This is another reason that you see your old memories unfold (events) when one dies because these memories unfold backwards from the falaco soliton which represents you. Sub-groups whom abuse social relations also disappear from your falaco soliton (evil “evaporates”) when you do something that stands up to the protection of your identity, the identity of your loved ones and people you care about. Intruding into someone's personal life can be considered a crime. Please note that torsional wave trackers (radars, torsional wave locators, scalar locators) can be used to track such activity.

RFID chips: Radio frequency identification chips used for identifying an object or person's identity. Radio frequency identification is important since it is using resonance just as falaco solitons do. Again, used for identification, contact and communication.

Worms: Same as falaco solitons.

Time/space: Not just 3D Coulomb field space in which we live in but the complete 3+2 layer system of events and relations to which we belong to and live in.

Microwave power transmission: Spiral, torsional wave used for power (energy) transmission. Microwave operates in a specified frequency range and microwave is emitted by the oscillator. Please also see Dr. Nikola Tesla's radiant energy publications for more information.

Délibáb (Hungarian): You see this on the roads or in a pasture on a sunny or hot day usually in the summer. It looks as if the road or the field which you look at is a mirror. Time/space behaves in a similar way. You might see time/space coincidences, collision of time/space fields that might usually result in amazing folds of events or something unusual for you.

Torsional waves: Torsional waves are spiral waves which look like the waves when you pull the plug in a tube for example. Please also see Dr. Nikola Tesla's radiant energy publications for more information.

- Worm establishment per resonance
- *Right and left door* branches in the falaco soliton system
aka social vibe described on the pocketFIT
and FIT books.
- Right and left door: depending on to which
directions the falaco soliton is turning as in
microwave power transmission

Resonance: Resonance is the same frequency or wave of 2 or more things which result in resonant coupling.

Reflection: Reflection is the reflection of waves which do not resonate but reflects the waves which fall onto it.

Teleportation: It is well observed that falaco solitons can transmit energy in time/space as well as microwave torsional power transmission does. As a result, falaco solitons or chakras too are energy “connections” between people which can be positive, supportive, destructive or intrusive.

Standing wave: A wave which penetrates back and forth between 2 or more points. Even in time/space. Such wave system can build up cycles such as a planet have for example

For the reader:

If the reader ever wondered about succeeding at the very basic principles of everyday small things in your life. Which are, according to the author, are the biggest drivers of your life. Then this book is for you.
