

The Motionless Electromagnetic Generator (MEG)

One build-up has produced up to 100 times more power than was input
Overunity performance successfully replicated independently by other researchers

See J.L. Naudin's complete replication results and readings

U.S. Patent awarded

The MEG was featured comprehensively on the U.S. Department of Energy Website (see copy)

How the MEG works

Status report updates - see Correspondence Section

Journalist Nick Cook, formerly editor of Jane's Defence Weekly, discusses the MEG

Explanation of the Motionless Electromagnetic Generator with $O(3)$
Electrodynamics

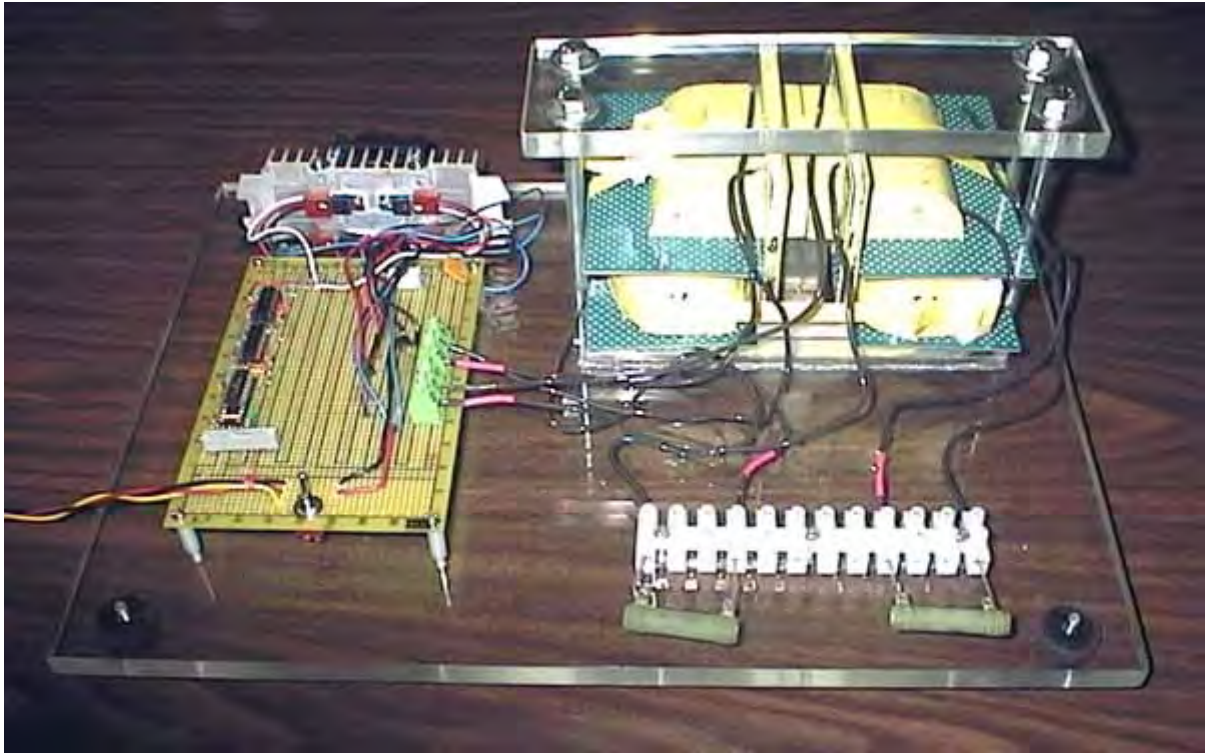

Foundations of Physics Letters, Vol. 14, No. 1, 2001

In Press (Foundations of Physics Letters)

Aharonov-Bohm Effect as the basis of Electromagnetic Energy inherent the Vacuum

Explanation of the Motionless Electromagnetic Generator by
Sach's Theory of Electrodynamics

Foundations of Physics Letters, Vol. 14, No. 4, 2001

Energy storage:

EEStor Ultracapacitor: 5 Minutes To Charge, 500 Miles Per Charge. A car powered by such an engine would have a range of 500 miles, on a 5-minute charge that would usually amount to \$9 of electricity. \$9 for 500 miles works out to about 45 cents a gallon.
