# Charm/Coldfusion DSP chip - Alpha( $\alpha$ ) 4.3 version 

(The modem of quiton/perceptron physics.)
(E-commerce and social media innovation)
Interpreting communication, navigation and language in the 3D world. The buzzword I definitely recommend to you is cross lateral reflexive thinking multi-dimensional space wise and sol-i-ton~sol-u-tion $\rightarrow \boldsymbol{\Delta t}$ which is called the Cantillation. This very much enables the development of quantum gravitation within the respected system. You can, indeed, gain information from off the air (ether) by listening to your own or others voice intonation by cantillating by its sound intonation.
The pronunciation/resonance of the words. This is very similar to lower and upper harmonics and technology also used in multi layer sound mapping(mp3) for compression or applied by a philharmonic orchestra for example. You will be a guru of the field. Some more examples of solitons (also called as solitude or solitary wave, circles [Ref: http://en.wikipedia.org/wiki/Soliton] on the pronunciation:

- boing ~ Boeing (not the same)
- Zoli ~ soli (as in solarium, Sun bathing)

sol-i-ton $\sim$ sol-u-tion $\rightarrow \Delta \tau($ RC/Tau time constant/derivative of resonance)
Hence, if we talk about the Coulomb charge field as electric current flowing in the aether. Then resistance, voltage and capacitive parameters can be calculated the same way, as in circuit electricity. Hence, traditional electricity formulas can be applied in the electric sea of Coulomb charge field with resistance, voltage etc in it. See also string theory, worm holes and capacitive coupling, radio homotopy of objects. Quantum neuron circuit of the ministry of the ether. Which in turn, determines the level of material virtual state in nuclear sub-atomic; physics term. A plasma watch of nuclear space.

$\boldsymbol{\tau}=\mathbf{R C}$ where
$\boldsymbol{\tau}=$ Tau, RC time constant in seconds
$\mathbf{R}=$ Resistance, in Ohms $\boldsymbol{\Omega}$
$\mathbf{C}=$ Capacitance in Farads $\mathbf{F}$
$\boldsymbol{e}=\mathbf{2 . 7 1 8 2}$ (natural base constant)
Hence, $\boldsymbol{e}$ and $\tau$ constants determine the effectiveness of such circuit. Please bear in mind that more sensitive subatomic particles, mesons, quarks can further increase the effectiveness of such resonant differential circuit. Similar to sonar and radar technology. See also radio homotopy, shape mapping of closed radio soliton circles under degree separation of four. $\underline{\mathrm{XYZ}}$ and a determinant O (origo) in a 3D isotopic space of reference system.
Ref: https://en.wikipedia.org/wiki/Homotopy
Emulation of reality and AI. Circle(canto) of Hell and Ministry of the ether are not comparable to each other. But if you use AI and emulate the knowledge state, then you have life and death
scenario of self manifestation in real world. Hence, camouflage of self existence. This coding/ decoding of information in the ether works also for any type of information/media in the ether. Meaning that chemical or any kind of physical, spiritual entity can resonate that indeed shall be beared in mind. The intermediate stages of this process occur in less than almost a billionth of a billionth of a billionth of a second, and are not observable.
[Ref: http://pdg.web.cern.ch/pdg/cpep/eedd.html]
So, are we talking with God by using the described sampling DSP technique? Yes we are, this document describes a perceptional communication protocol of the ether, Columb charge field around us in an explicit way.

As a practical use. Could we use optical (photon) and neutrino (hybrid) interferometry for mapping high resolution solution spaces in the isopotic 3D ether?

Please note the torque force/events in time/space that this creates and its influence in practice. As per Kw in car's engines or microwave torsional power transmission as in transformers, flux converters also applying Lorentz force basically. For example, if the assumption you think, say or do (events) was true, then something will happen, meaning that what you have said, thought, did or happen was actually true indeed. $\rightarrow$ So the equation (flux gate) dropped, got vaporized. Personal relationships, the economy and order must be beared in mind obviously.

Basically, what we are talking about is, that if we reflect „received" and sensed information in a 3D space, then we can achieve absolute information content of a given 3D field in our environment around us. Why is this? If we mirror (negate) the information that we receive in our environment around us, then we will have the absolute information content, that in turn can be used to make any other decision or reply. Meaning, that the person or .processor", modem in charge of receiving the information in the given 3D space is in full command of the information that it has received, perceived or sensed. As such, you can use this 3D reflective cantillation technique as an interpreter to emulate artificial intelligence basically, meaning, self created intelligence from an absolute knowledge set received in a given 3D field in your environment around you.

More on WMH (matter/life) waves (electrochemical composition of matter based on torsional resonance, string theory/kymatica) can be found at:

- Electrochemistry, https://en.wikipedia.org/wiki/Electrochemistry
- Metabolism, https://en.wikipedia.org/wiki/Metabolism
- Metaphysics, https://en.wikipedia.org/wiki/Metaphysics

Due to your voice and presence interacts and being re-actively active in the 3D ether (Coulomb charge field) in which we exist. You can not just make your life better by Feng shui like order around you that will make these electrochemically active electromagnetic waves (like a battery or power converter) converge the way you want, but also actively command them. Ever wondered about those "abracadabra" magic words in cartoons and ancient sci-fi movies? Or talking to flowers and plants?

You can also try saying this out loud or whispering as if you were praying: "Whorl calibration per spins, X-es, RFID per democracy." This way, you set your own consciousness as well as the 3D field with which you interact and exist in. This also means, that you can say that you want to be "released from evil" as if you were praying indeed. So magic words and praying does work indeed! Movies are not made up from nothing indeed either. Who would buy into message-less empty trash? No one!

Supplementary research notes on metaphysics and intelligence: This document was partly prepared based on practical knowledge in the following scientific publication:

- Quiton/perceptron physics by U.S. Army materiel command.

There is scientific evidence that the vacuum (ether) has electromagnetic permeability. This means that the ether acts as a capacitor and stores charges as well as magnetic components. Now, this works similar to how matter levitates in pure water. In radio science means, that sea of pure Coulomb charge acts as a flow of pure radio field as matter would float in pure water. As such, everything that can be differentiated from this sea of pure Coulomb charge radio field basically acts as a magnetic component. These magnetic components close in under some degree that compile into information/transverse magnetic components basically. What matters in real life processes is change. Hence we are always looking for a "shift" for differentiation/derivation.

This differentiation/derivation, then tell us what basically matters. Hence, in existence, truth is judged by difference eternally. Now, with this document, the reader can differentiate, and hence interpret these radio signal feedback in the ether. The author refers to such differentiation technique as cantillation. In ancient scientific jargon, also called the Greek of the ether. In electronics, this means that an electromagnetic field is sampled by its longitudinal and transverse components. By longitudinal, we mean scalar or numerical, meaning that there are no transverse/magnetic components in the examined electromagnetic field. This can be a room, radar network or a Faraday cage etc. This radio field has flux. These magnetic components are generally referred to as flux in electromagnetism and radio engineering.
Hence the Tau or RC time constant of this electromagnetic
 flux field tells the effective
difference between real/longitudinal and magnetic or noise components. Hence, you can also say that the ether works only $36.8 \%$ in regards to electromagnetic fields containing electron, proton or neutron particles. Obviously, the concern of higher degree effectiveness and other aspects come into question as the presence of other particles, quarks, mesons are put into real/ longitudinal numeric per magnetic/transverse noise equation too! Ultimately, the interpretation mechanism is a "what is real"/"how to go forward" system in which evolutionary and guided rules apply. Hence, this becomes a question of relative numeric calculation of time/space echoes and interpretation.

Technical note: Please bear in mind that such electric RLC circuit can have neurophysiological effects! Ref: https://www.who.int/peh-emf

## NOTES FOR THE VISUALLY IMPAIRED READERS

This document was prepared based on scientific publications. The best way to "approach" visually impaired concerns of vision/sense is the border field between the already treatable parts of our body and parts that this document employs. Such remedial experiment of vision/sense is encouraged to be carried out by professional and recognized supervision. Ref:
